## **Green oasis for everyone: multifunctional raised bed Frieda**

In a world that is increasingly characterised by technology and a hectic pace, we often look for ways to find peace and balance. A raised bed in social or medical facilities, in offices or on your own balcony offers precisely this rare oasis of relaxation and reconnection with nature.

### **Structure of the raised bed**

Our innovative Frida raised bed combines convenience with flexibility. The mobile base frame is available in three different sizes:

- Small raised bed variant, area to be planted 54 cm x 74 cm, final dimensions 94 cm x 65 cm.

Due to their design, these raised beds are equipped with four lifting columns.

- Medium raised bed variant, area to be planted 54 cm x 119 cm, final dimensions 139 cm x 65 cm.
- Large raised bed variant, area to be planted 54 cm x 144 cm, final dimensions 163 cm x 65 cm. If required, the plant tray can be manufactured with a maximum width of 65 cm, the outer dimension is 74 cm.

The height can be individually adjusted via an app or a hand switch. Heavy-duty castors with parking brakes ensure easy mobility and safety. The raised bed has a valid CE mark and was manufactured largely in accordance with medical product criteria. It is barrier-free and adapts to the needs of different groups of people.

### **Accessibility**

The plant tray is designed so that it can be driven under on one side with a wheelchair. The cleverly designed plant tray has a slight slope and a double base made of perforated sheet metal to prevent waterlogging and make it easier to drain excess water via a drainage valve + hose.

### **Garden tools and accessories**

A work table (35x33cm) made of stainless steel with linoleum covering can be flexibly attached to both sides of the wooden panelling and there is the option of a storage strip for tools.

### **Temperature protection through wood panelling**

To protect the plants and living organisms from excessive heat, the raised bed is clad with 15 mm thick solid wood.

### **Materials used**

The raised bed impresses with its practical functionality and the conscious selection of ecologically sustainable materials. The design includes a plant tray made of durable stainless steel and all components are designed for easy replacement.

### **Additional elements**

#### **Optimum plant care**

Our lighting provides your plants with the perfect light spectrum all year round, even in the shadiest places. This promotes healthy growth and ensures your horticultural success.

A retaining bridge with an integrated light is fitted in the centre of the raised bed for this purpose. The light spectrum is specially designed for plant growth and fruit ripening, can be dimmed as required and is easy to dismantle. The distance to the ground is 50 cm.

#### **Viewing window**

We have fitted a viewing window with a lockable flap on the side of the raised bed that cannot be driven under to allow you to see below the surface of the soil.

#### **Orientation**

A small lifelike bronze sparrow figure can be attached to the corner of the raised bed to help visually impaired people find their way around.

### **Further information**

Are you dreaming of a customised raised bed that is perfectly tailored to your wishes and needs? Our craftsman's workshop Artefact manufactures each raised bed according to your individual ideas. On delivery, the raised beds are pre-assembled and ready for immediate use.
